Figure S1: Highest OncoKB level of evidence per (a) tumor type and per (b) tumor type and gene for a subset of solid tumor samples from the MSK-IMPACT cohort with n≥100.
Figure S1. Analysis of solid tumor samples from the MSK-IMPACT cohort with n≥100. Clinical actionability of solid tumor samples from the MSK-IMPACT cohort with n≥100; 14 tumor types are shown. (a) Highest level of evidence per tumor type and (b) per tumor type and gene. Cell color as shown in the key. Columns indicate sample tumor type, rows indicate gene alteration present in sample, and numbers indicate the percentage of samples per tumor type that harbor an alteration in each gene. For each tumor type, data from 2017 and 2022 are shown side-by-side.
