

Supplementary Figure 5

Supplementary Figure 5. Non-specific negative effect of DMSO on the GVT activity of T-cells. Lethally irradiated BALB/c recipients were transplanted with C57BL/6 TCD BM cells with 0.5×10^6 C57BL/6 WT T-cells after 24 hours of pre-treatment with or without DMSO. On day 0, HSCT recipients were challenged with 0.25×10^6 luciferase-expressing A20-TGL tumor cells. Data are combined from two independent experiments ($n = 8-10$). Survival curve and the causes of deaths are shown.
