

Figure S4

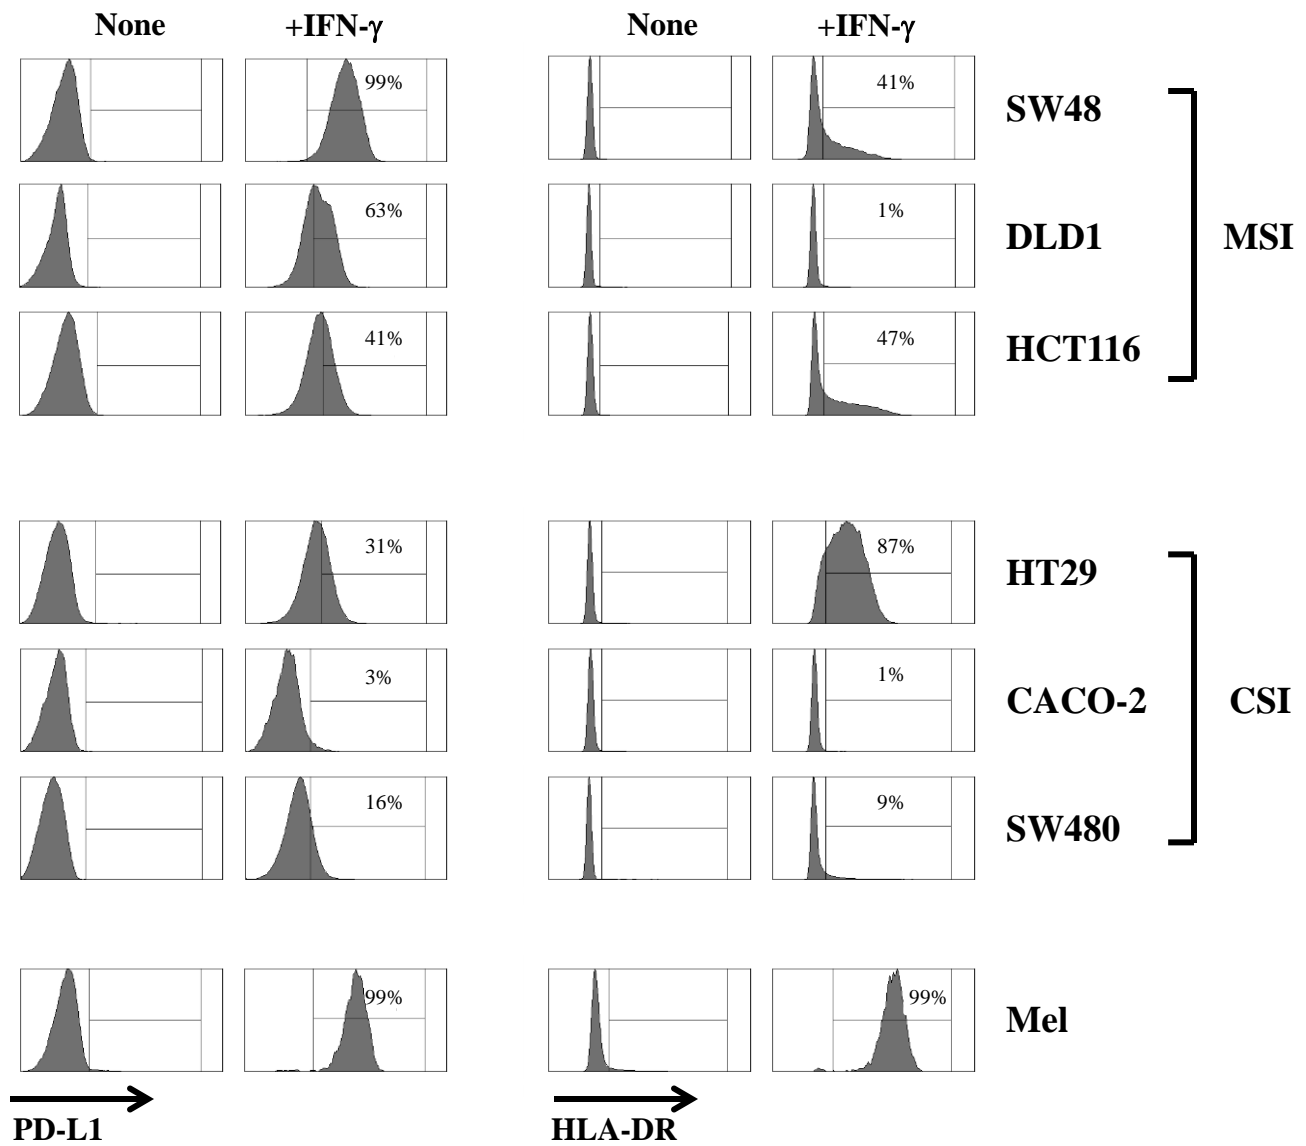

Fig. S4. PD-L1 induction on human CRC cell lines. Human MSI CRC (SW48, DLD1 and HCT116), CIN CRC (HT29, CACO-2 and SW480) and melanoma (Mel) cell lines were incubated 3 days in the presence or absence of human rIFN- γ at 500 IU/ml. Cells were then stained for PD-L1 and HLA-DR expression using flow cytometry.
