

Supplementary Table S6. HGSOc patient characteristics evaluated with FFPE specimens of primary tumors.

Values are presented as median (range) or number. FIGO, International Federation of Gynecology and Obstetrics, CA125, cancer antigen 125, N/A; not available. Number of primary tumors, n=62.

Characteristics	
Age (year)	56.5 (35-82)
FIGO stage (FIGO 2014 classification)	
I	6
II	5
III	45
IV	6
Serum CA125 level at diagnosis (U/ml)	478 (15.0-8581)
Residual tumor at initial debulking surgery	
Yes	30
No	32
Ascites malignancy	
Positive	37
Negative	22
N/A	3
B7-H3 IHC score	
0	2
1	29
2	21
3	10
Number of CD206+ M2 macrophages	53 (1-169)
