

Supplementary Fig. S10: Schematic of the animal experiment design. (A) Flowchart for the scheduling of CD4 and CD8 depletion experiments. (B) Experimental design for T cell transfer experiment in mice bearing 425 murine ICC and treated with GC/ICB or GC alone. Mice with established orthotopic 425-ICC tumor were treated with GC (twice/week) alone or GC (twice/week) + ICB (every 3 days).
