

Supplementary Fig. 3: CD40 antibody fine specificity. Murine splenic B cells were preincubated with buffer only and left unstained (black), or preincubated with rat IgG2a (red), soluble CD40L (green), FGK45 (blue), 3/23 (purple), 1C10 (beige), or FGK45 F(ab)₂ (orange) and then stained with PE-conjugated FGK45 or CD45-PE (as a control) and subsequently measured by flow cytometry.
