

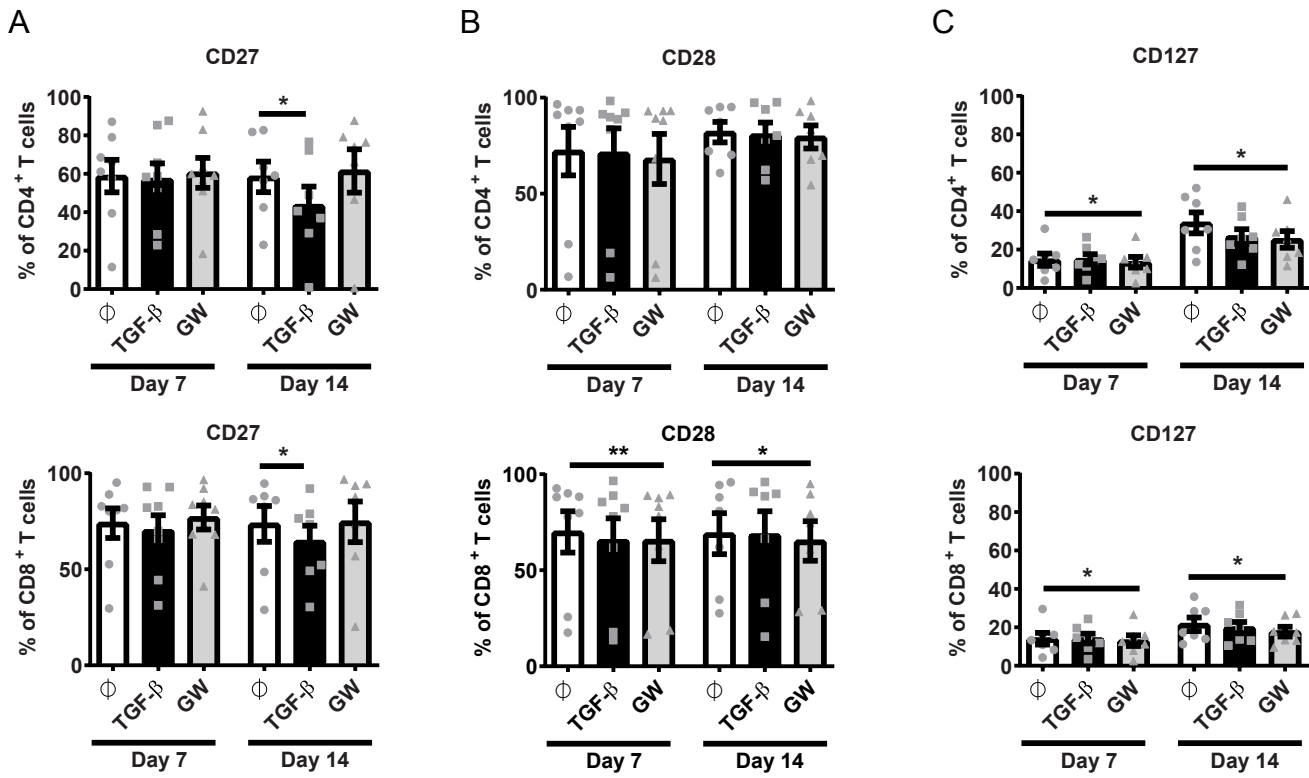

Figure S2

Supplementary Figure S2. Additional phenotypic features. (A). Percentage of CD27, (B). CD28 and (C). CD127-expressing T cells at day 7 and 14 of culture following anti-CD3/CD28 stimulation. 7 to 8 different donors, represented individually and by the mean. Experimental conditions (TGF- β supplementation and GW788388 treatment) were compared to the control condition (\emptyset , no added TGF- β or GW788388). Error bars represent SEM. * $p < 0.05$, ** $p < 0.01$.
