

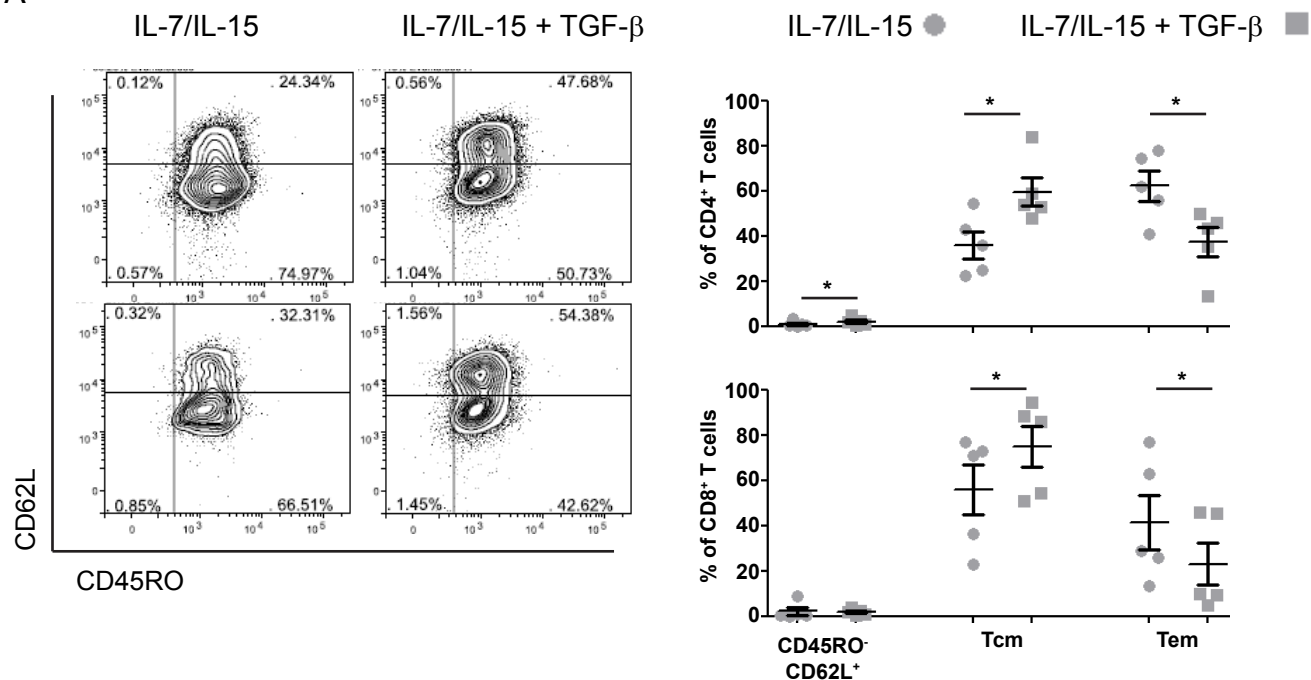

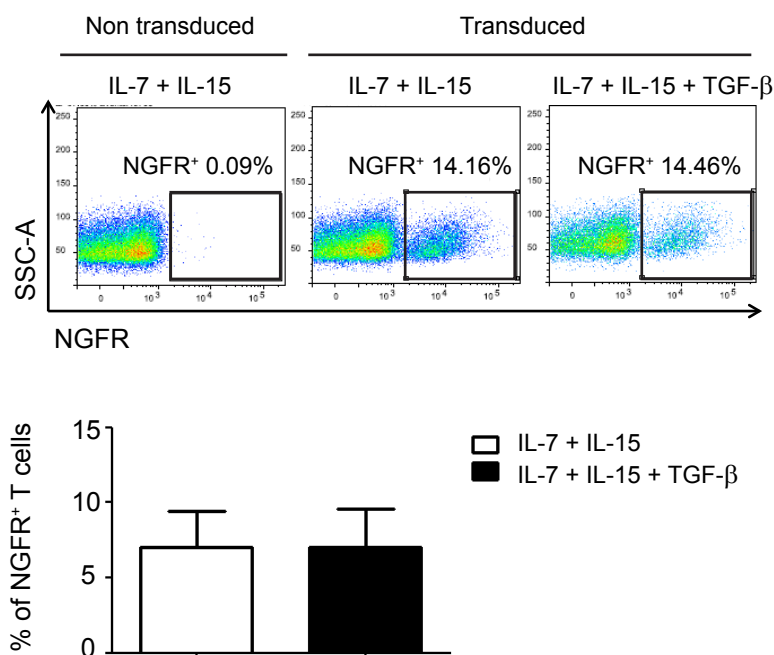

Figure S6

A

B

Supplementary Figure S6. TGF- β enhances Tcm differentiation when combined with IL-7 and IL-15 and does not alter T-cell transduction efficiency. (A). Representative dot plots of Tcm (top right quadrant) and Tem (bottom right quadrant) after anti-CD3/CD28 stimulation (day 7) in the indicated conditions (IL-7/IL-15 +/- TGF- β) and compilation from 5 different donors. (B). Representative dot plots and compilation from 4 donors showing transduction efficiency obtained after a 7-day expansion culture using anti-CD3/CD28 stimulation and IL-7/IL-15. Transduced T cells are identified by the expression of low-affinity nerve growth factor receptor (NGFR, CD271) expression. SSC, side scatter. Error bars represent SEM. * $p < 0.05$
