

Supplementary Fig. S7. xCT antibodies induced CSC cell death. Representative FACS plots of Dissociated TUBO- or SKBR3-derived tumorspheres were incubated for 5 days with or without sera (1:50) from vaccinated mice, then analyzed by FACS. (A) Representative density plots of Sca1 and CD44/CD24 expression on TUBO and SKBR3 tumorspheres, respectively. (B) Representative histograms of DCF staining for intracellular ROS. (C) Representative Annexin-V/7-AAD density plots for apoptosis analysis. The same staining protocol and gating strategies were used for the analysis of ferroptosis. Representative results from 3 independent experiments.
