

Supplementary Table Legends

Supplementary Table 1. Details of SNPs included in each of the models (.pdf)

Supplementary Table 2. Derivation of phenotypic risk scores variables (.pdf)

Supplementary Table 3. Validation cohort sample size and incident CRC cases, stratified by sex and risk score (.pdf)

Supplementary Table 4. Characteristics of included participants from the UK Biobank cohort without a history of CRC, adenomas or IBD at baseline assessment, including distribution of variables between those with and without incident colorectal cancer in 6 years of follow up (.pdf)

Supplementary Table 5. Mean standardised GRS (standard deviation), stratified by ethnicity (.pdf)

Supplementary Table 6. Discrimination ($AUC \pm 95\% CI$) for the risk models in men and women (Data for Figure 1). (.pdf)

Supplementary Table 7. Discrimination ($AUC \pm 95\% CI$) in white / ethnic minority groups (.pdf)

Supplementary Table 8. Discrimination ($AUC \pm 95\% CI$) restricting the genes-only models to the samples with phenotype data available. P-value from test of whether there was any evidence of a difference in discriminative ability between genes and genes plus phenotypes versions using the algorithm of DeLong *et al.* implemented in Stata. (.pdf)

Supplementary Table 9. Discriminatory performance measures for each of the risk models for 6-year risk of developing colorectal cancer in women (.pdf)

Supplementary table 10. Discriminatory performance measures for each of the risk models for 6-year risk of developing colorectal cancer in men (.pdf)

Supplementary Table 11. Relative risk calibration in women (data for Figure 3) (.pdf)

Supplementary Table 12. Relative risk calibration in men (data for Figure 4). (.pdf)

Supplementary Table 13. Comparison of discrimination ($AUC \pm 95\% CI$) of genes-only GRS models with models additionally including age and family history (.pdf)

Supplementary Table 14. Discrimination ($AUC \pm 95\% CI$) excluding people with cancer at baseline (.pdf)

Supplementary Table 15. Discrimination ($AUC \pm 95\% CI$) excluding all relatives in UK Biobank (.pdf)

Supplementary Table 16. Discrimination ($AUC \pm 95\% CI$) excluding all people with a history of colonoscopy at baseline (.pdf)

Supplementary Table 17. Discrimination ($AUC \pm 95\% CI$) for the risk models in women and men aged above and below 60 (.pdf)

Supplementary Table 18. Discrimination ($AUC \pm 95\% CI$) for the Abe model excluding folate (.pdf)

Supplementary Table 19. Discrimination ($AUC \pm 95\% CI$) for the Huyghe model only including incident CRC post 30th September 2014 (main analysis) and the full 6 years of follow-up (sensitivity analysis) (.pdf)
