

Supplemental Figure S2. Cost-Effectiveness Acceptability Curve

This analysis assesses the robustness of the cost-effectiveness of primary hrHPV genotyping and cervical cytology co-testing with reflex to DS based on probabilistic sensitivity analysis Monte Carlo simulations. This intervention was evaluated separately against two SOC algorithms: SOC 1 – primary hrHPV pooled and cervical cytology co-testing with reflex to hrHPV genotyping, and SOC 2 – primary hrHPV genotyping and cervical cytology co-testing with no reflex.

Abbreviations: DS, p16/Ki-67 dual-stained cytology; PSA, probabilistic sensitivity analysis; QALY, quality-adjusted life-year.
