

Demo et al., Supplemental Figure 1

Supplemental Figure 1: Cell cycle arrest. HT-29 cells were treated with 2 μ M PR-171, 2 μ M bortezomib, or 0.25% DMSO for 1 hr followed by a 24 hr washout. Cells were subjected to ethanol fixation, treated with 1 mg/ml RNase and stained with 20 μ g/ml PI. DNA content was determined by flow cytometry .
