

## Supplementary Fig. 5

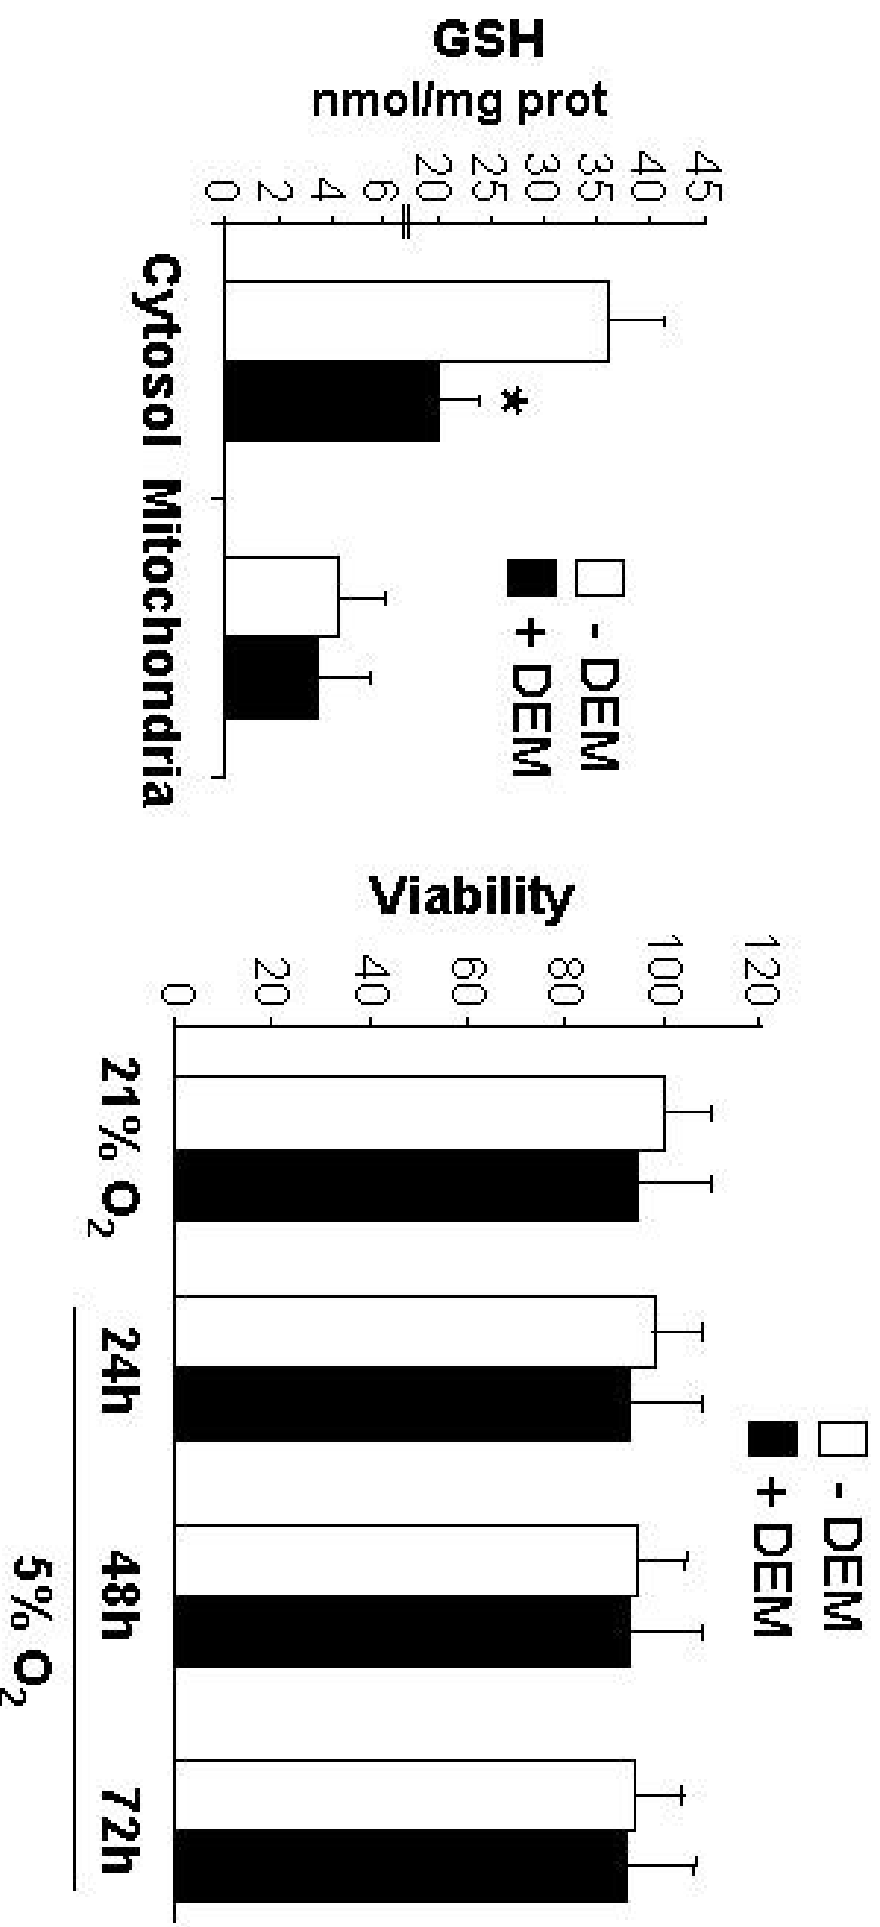

Figure 5. **Role of cytosolic GSH in the survival of HepG2 cells during 5% O<sub>2</sub> incubation.** HepG2 cells were preincubated with DEM (0.2 mM) to deplete cytosolic GSH levels and after exposure to 5% O<sub>2</sub> for 72 hours the survival was determined. The data is the mean  $\pm$  SD of 3-4 experiments. \*p<0.05 vs. cells without DEM.
