

Figure S1. Cells were pretreated with 75 μ M cycloheximide (*CHX*) for 1 h, and then incubated in the absence or presence of 10 μ M edelfosine (*EDLF*) for 24 h, and analyzed for apoptosis by flow cytometry. Untreated control cells (*Cont*) and cells treated only with 10 μ M edelfosine were run in parallel. Data are shown as mean \pm SEM ($n=3$).
