

**Figure S3.** (A) Total Bcl-X<sub>L</sub> protein expression was analyzed by SDS-PAGE of cell lysates and immunoblotting. β-actin was used as a protein loading control. (B) HeLa-Bcl-X<sub>L</sub> cells were incubated in the absence (*Control*) or presence of 10 μM edelfosine for 96 h, and cell cycle distribution was analyzed by flow cytometry. Data shown are representative of 3 experiments performed.
