

Supplementary Figure 2. Expression levels of IKK β and IL-8/CXCL8 mRNA in MIApaca-2 transfectants cultured with 2 % serum for 24 h. The housekeeping gene glyceraldehyde-3-phosphate dehydrogenase (GAPDH) was used for normalization. The relative expression for each sample was determined as described in Materials and Methods. Results are the mean values \pm SD of three independent experiments. **, $P < 0.01$ versus Mock#2 cells.
