

	Number of wells with one cell	Number of wells with emergence	% emergence
Experiment 1	42	31	73.8
Experiment 2	117	91	77

Table 1: Almost all young NHEKs have an emergence potential

Young NHEKs were diluted to one cell per well and cultured to senescence and emergence. The numbers of cultures performed and the percentages of cultures having developed emerging clones by the end of the experiment are given.
