

Vasculostatin Inhibits Intracranial Glioma Growth and Negatively Regulates In vivo Angiogenesis through a CD36-Dependent Mechanism

Kaur et al.

Individual Author Contributions

B. Kaur performed and coordinated experiments in collaboration with N.S. Devi, Z. Zhang, and J.J. Olson for the rodent glioma models, H. Shim and H. Mao for the rat brain imaging, D.J. Brat and E.M. Sandberg for the quantification of tumor vascular density, E.M. Sandberg and S.M. Cork for *in vitro* angiogenesis assays, E.M. Sandberg and M. Febbraio for the mouse corneal experiments, P.A. Klenotic and R.L. Silverstein for the GST binding experiments, S.M. Cork and C. Tucker-Burden for analysis of Vstat120 in clones and CD36 in endothelial cells and brain sections. B. Kaur and E.G. Van Meir conceived project, established collaborations, designed research, interpreted results, and wrote the manuscript. All authors read the manuscript.
