

**Supplementary Figure 3.** Quantification of vitiligo in vaccinated animals post surgery. WT mice were inoculated with  $10^5$  B16F10 cells i.d. on day -14 and vaccinated with  $10^8$  pfu of AdhDCT or AdLCMV on different days before or after the surgery. Appearance of vitiligo was recorded 3 weeks post surgery and representative picture for each group of mice is shown. Incidence of vitiligo is indicated in the upper right corner on each photograph.
