

Supplemental Figure 1

Mammosphere formation following single cell plating in non-adherent culture (A). Representative photomicrographs of mammospheres formed from MCF7 cells labelled with the tracking dyes CFSE (B, upper panel) and PKH (B, lower panel). Percentage mammosphere formation in which none, a single or multiple dye-retaining cells were counted (C). Percentage of mammospheres which contained a single mammosphere-forming unit when passaged (D).
