

Supplemental Table 2 : Baseline characteristics of patients with early-stage NSCLC (n=86)

Characteristics	Number	%
Sex		
Male	51	59
Female	35	41
Age, years		
Mean		62,5
Range		36-81
Smoking history		
Smoker	70	81
Never smoker	6	7
Unknown	10	12
Pack/years		
Mean		45
Range		12-120
Histological type		
ADC	69	80
SCC	17	20
pTNM stage		
T1N0M0	27	31
T1N1M0	3	3,5
T1N1M1	1	1,5
T2N0M0	44	51
T2N1M0	6	7
T2N1M1	5	6
Vital status of patients		
Alive	73	85
Disease free	60	
In relapse	13	
Dead	13	15
from metastasis of NSCLC	12	
from other causes	1	

Note: Pathologic staging and histological types of lung cancer were determined according to the TNM staging system, and to the histologic classification of the WHO, respectively. Abbreviations: ADC, adenocarcinoma; SCC, squamous cell carcinoma; pTNM, pathologic TNM.
