## Supplemental Figure S1

**Stable transfection of ZMYM2-FGFR1 in Src-Yes-Fyn null, mouse embryo fibroblasts** (A) Src-Yes-Fyn null mouse embryo fibroblasts (SYF<sup>-/-</sup>) and NIH3T3 cells were infected with ZMYM2-FGFR1 or MIEG3 retroviral constructs. Stably infected pools were sorted for GFP positive cells. B) Tracking PKH26 labeled cell division (see Methods) demonstrates that ZMYM2-FGFR1 expression promotes cell division in NIH3T3, but not in SYF<sup>-/-</sup> cells.
