

Differential Expression Analysis for Dr. Heemers.											
These 47 Affymetrix HG-U133Plus2.0 probesets are the result of selecting only probesets that met the following two criteria:											
1) LUC treated with R1881 had statistically lower expression values with more than -2 fold-change compared to each of the other three groups.											
2) Of the remaining three groups none of the 3 pairwise tests showed significant difference.											
Table results (log2 Fold Change, t, adjusted p-value, etc.) are from the comparison of the LUC Samples R1881 treated (n=3) vs. EtOH treated (n=3).
