

Supplemental Figure 1: Forest plots for meta-analysis results with gene x environment interaction p-value < 0.01. Odds ratios (ORs) and 95% confidence intervals (95% CI) for the multiplicative interaction term. Black boxes are proportional in size to the inverse variance for each study and the lines depict the confidence intervals. The diamonds represent the fixed-effects meta-analysis results, with the width of the diamond representing the confidence interval.
