

**Supplemental Table 6: Odds Ratio, 95% CI and p-value for main effect of vegetable consumption by genotype, based on pooled data set. OR is calculated per unit (servings/day) increase, derived from sex- and study-specific medians.**

Genotype	N	OR (95% CI)
AA	8745	0.73 (0.60-0.89) p = 0.002
AC	1765	1.51 (1.00-2.29) p = 0.05
CC	88	2.87 (0.20-40.7) p = 0.44
