

Fig. S4: Correlation between PDL-1 expression and PD-1-positive infiltrating T cells

Two groups of patients with PDL-1 expression < (0) or > 10% (+/+/+/+) were defined. This expression was correlated with infiltration of PD-1⁺CD4⁺T cells (A) or the total number of PD-1⁺CD4⁺ and PD-1⁺CD8⁺T cells (B) or the total number of PD-1⁺ cells (C). Horizontal bar (in red) for each group represents the median with the number in brackets.
