

**Supplementary Table 2.** Survival of Canines with Meningioma Following Surgery

<b>Case Number</b>	<b>Survival (Days post-operation)</b>	<b>Histological Subtype</b>	<b>Cause of Death</b>
12	6	Transitional	Aspiration Pneumonia
13	17	Anaplastic	Tumor Progression
14	48	Transitional	Euthanasia due to Tumor Progression
15	67	Transitional	Tumor Progression
16	69*	Fibrous	Alive
17	178	Meningothelial	Tumor Progression
18	222	Epitheliomatous	Tumor Progression Squamous Cell
19	252	Meningothelial	Carcinoma Left Mandible
20	262	Meningothelial	Tumor Progression
21	386	Unspecified	Tumor Progression
22	428	Transitional	Tumor Progression
23	1855	Unspecified	Tumor Progression

Cases were seen at the University of Minnesota, Tufts University, Purdue University, and Washington State University, and were confirmed to be meningiomas by histopathology. \*Denotes dog that is still alive.
