

**Supplemental Table 1. Crizotinib and ganetespib synergistically inhibit colony growth of NIH3T3 cells expressing constitutively active, TKI-resistant MET (MET-Y1248H).** Combination index (CI) was calculated (as in Figure 3C). A CI value < 1 indicates synergy.

Crizotinib (nM)	Ganetespib (nM)	Combination Index (CI)
150	10	0.81
200	10	0.73
