

Supplementary Figure 3

Normal fibroblasts (GM38 cells) do not express VEGFR2 and are not sensitized to JX-594 infection upon incubation with VEGF. Left: HUVEC or GM38 normal human fibroblasts (ATCC) were pulsed with 0 or 30 ng/ml VEGF165 for 30 min, and cell lysates were collected as described in Materials and Methods and blotted and probed for pVEGFR2, VEGFR2 and tubulin as loading control, as indicated. Right: GM38 cells were pulsed with 0 or 30 ng/ml VEGF165 and infected with JX-594 at MOI 0.01 for 72 h. Cells and supernatant were collected and titered on U2OS cells as described in Materials and Methods.
