

Supplementary Fig. S3. Generation of Kindlin-1 deficient Met-1 cells. (A, B) Loss of Kindlin-1 in CRISPR A1, A2, A3, B3 and B6 clones was confirmed by PCR (A) and western blot (B). (C) Re-expression of His-tagged Kindlin-1-WT and Kindlin-1-AA to levels similar to those found in the parental Met-1 cells. Actin was used as a loading control. (D) Re-expression of His-tagged Kindlin-1-WT and Kindlin-1-AA into A2, B3 and B6 Kindlin-1-Null clones. Actin was used as a loading control.
