

Fig. S3 USP1 interacts with EZH2 and inhibits EZH2 ubiquitination.

(A) HEK293T cells were transfected with HA-EZH2 and MYC-USP1, and cell lysates were immunoprecipitated with Myc-tag antibody followed by immunoblotting analysis using the indicated antibodies. **(B)** U87MG cells were transfected with USP1 shRNA and Flag-Ubi, and then treated with MG132 for 6 h. Cell lysates were precipitated with EZH2 antibody and then analyzed by immunoblotting using the indicated antibodies.
