

Supplementary Figure 5. Nrf2 activation and α -particle irradiation. Although not statistically significant, there were marginal improvements in survival in BEAS2B cells expressing mutant T80K, and to a lesser extent wild type Nrf2, compared to control cells. The α -particle data in Figure 4c is re-plotted here with a re-scaling of the x-axis in order to more clearly demonstrate the relationships between vector (ϕ) control and Nrf2 expressing cells.
