

Supplementary Figure S3

Supplementary Figure S3. The NF- κ B inhibitor PDTC has synergistic activity with the BET inhibitor PLX51107. **A.** Synergy was calculated with the Chou-Talalay method. Combination indexes < 1 . **B.** Western blot analysis of 92.1 cells treated with 0.5 μ M PLX51107 and 1 μ M PDTC as single agents and in combination for 48hrs, showing the inhibition of p65 phosphorylation and p50 expression, and the induction of I κ B α and PARP cleavage. **C.** Apoptosis assay measuring cell permeability to fluorescent stains YO-PRO and propidium iodide.
