

Vehicle

CEA-4-1BBL

CEA-TCB

CEA-4-1BBL/CEA-TCB

Supplementary Figure 3: Representative autoradiography slides after CEA-4-1BBL/CEA-TCB single or combo treatment. In the vehicle group uptake areas at the tumor rim and no uptake in the tumor center was observable. After CEA-4-1BBL single treatment, larger regions at the rim and no uptake in the center was detectable while CEA-TCB treatment lead to uptake at the rim and also uptake in the tumor center. The combo treatment induced the strongest and homogenous signals in the rim and also the most homogenous uptake in the center.
