

Supplementary Figure S7.

a-b) HB11;19 cells were treated with increasing SHP099 (a) or Gilteritinib (b) for 72h. Survival was evaluated by CCK8 assay. Data are shown as mean \pm SEM of two independent experiments (N=2). IC50 was calculated using non-linear regression.

c) HB11;19 cells were treated with DMSO, SHP099, Gilteritinib or the combination for 72h. Survival was evaluated by CCK8 assay. Data are shown as mean of three independent experiments (N=3). The graph was generated in SynergyFinder (version 2.0).
