

Fig. S5

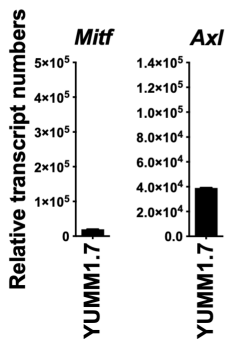

Figure S5. Characterization of the dedifferentiated signature of YUMM1.7 melanoma cells.

qRT-PCR analysis of *Mitf* and *Axl* gene expression in the YUMM1.7 mouse melanoma cell line ($n = 2$, in duplicate; mean \pm SEM). The scales of the graphs are identical to those in Figure S2 in order to be comparable to the *MITF* and *AXL* gene signature of human melanoma cells.
