

INFORMATION FOR AUTHORS

Manuscripts for *Cancer Research* must represent new and original contributions, not previously published, and, if accepted, not to be published elsewhere. They should be typed, double-spaced, with ample margins, on bond paper. The original and one carbon copy should be submitted. Manuscript pages should be numbered consecutively. Every paper should end with a brief, logical *summary* in which the points proved by the investigation are outlined.

Critical reviews on subjects dealing with cancer and allied fields will be considered for publication in *Cancer Research*. Such reviews should attempt to correlate the various approaches to a problem in a manner that will indicate the trends and emphasize the aspects that require further clarification. Critical analyses of the pertinent issues and expressions of opinions are encouraged. Preferably, the reviews should not exceed 7 pages (6,000 words) in length, including references.

Comments: A limited space will be available for the publication of comments on published data in the cancer field; they should not exceed 500 words. Comments written for the presentation of new data will not be published.

The title of the paper should be as short as is compatible with a clear indication of the subject matter. Chemical formulas should not be included in the title. The title of the paper, the name of the author (or authors), location, and any acknowledgments should appear on a separate page.

Footnotes should be numbered consecutively and should appear on a separate sheet.

Tables should be typed on separate sheets and should be numbered. Each must have a brief descriptive title. Tables should be arranged for vertical position on the page, either in single or double column. Every column must be supplied with an appropriate heading.

Illustrations: The preparation of photographs, charts, and graphs is particularly important, and authors are requested to follow very carefully the directions given below.

Half-tone illustrations (photomicrographs and photographs) are designated *figures* and are printed as plates at the end of each article. Figures in moderate numbers will be accepted if they are of good technical quality and essential for the clarity of the presentation. Plates in color and excessive numbers of figures, if accepted, will be charged to the author. Only clear glossy photographs should be submitted. Mount all photographs tightly together on white cardboard. Place as many together as will make a plate not to exceed $6 \times 8\frac{1}{2}$ inches. Each figure should include the appropriate number on a lower corner, and they should be numbered consecutively starting with Figure 1.

Legends for plate figures should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Figures."

Line cut illustrations (graphs and charts) are designated *charts* and are printed in the text. These should be numbered in consecutive order starting with Chart 1. Charts should be planned so as to eliminate waste space; they should be ruled off close to the area of the curves, and descriptive matter should not extend beyond the curves. Charts should be so prepared that no letter or figure will be less than 2 mm. high after reduction to the size in which it will appear. Generally they will be reduced to fit either the one- (3-inch) or two- (6-inch) column width of the page. Original line drawings on high quality white drawing paper or board, blue tracing cloth, or coordinate paper *printed in blue* should be used. Typewritten charts are not desirable, as they permit but slight reduction. Only India ink should be used for drawing or lettering. One set is sufficient. Legends for each chart should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Charts."

Mounts of charts and photographs larger than $8\frac{1}{2} \times 11$ inches will not be accepted. When original drawings exceed this size, photographed reductions should be sent.

References should include, in order: author, title, journal abbreviation (*Quarterly Cumulative Index Medicus* form), volume number in arabic numerals, inclusive pages, and year. Book references should give: author, title, pages, edition number, city, publisher, and year. All references should be checked with the original publications and should be *arranged in alphabetical order*. Each number in the references is to refer to only one paper. References to unpublished work or personal communications should appear in footnotes. The following examples illustrate the desired style:

WOGLOM, W. H. Please! An Editorial. *Cancer Research*, 2:846-50, 1942.

GREENSTEIN, J. P. *Biochemistry of Cancer*, pp. 5-20. 1st ed. New York: Academic Press, Inc., 1947.

Changes in proof: Any but minor changes from the manuscript which are made in proof will be billed to the author.

Reprints may be ordered before publication, at cost, according to a schedule of prices accompanying the galley proof of the article.

Manuscripts, reviews, and correspondence related to contributions should be addressed to: DR. HAROLD P. RUSCH, Editor, *CANCER RESEARCH*, McArdle Memorial Laboratory, University of Wisconsin, Madison 6, Wisconsin.

INFORMATION FOR SUBSCRIBERS

All subscriptions and business inquiries should be addressed to the publishers, THE

UNIVERSITY OF CHICAGO PRESS, 5750 Ellis Avenue, Chicago 37, Illinois.

more light
of
better quality
gives
higher resolution

Here is a light source we believe really worthy of the optical efficiency of the modern microscope. It achieves the long-sought-after state of critical illumination at all powers focused precisely upon the slide. The light enters the microscope objective at an uncommonly wide angle (i.e. high numerical aperture) providing resolution of the highest order.

Your first look at a slide so ideally illuminated will be a memorable experience. Let us send you the brochure describing this notable contribution to better microscopy.

Scopicon
MICROSCOPE LAMP
SCOPICON, INC. 215 EAST 149th STREET,
NEW YORK 51, N. Y.

YOU SEE THE DIFFERENCE . . .

USUAL NARROW ANGLE
To fill objective lens, light must be sharply deflected when striking minute components under observation. Those incapable of widely deflecting the beam are not seen clearly.

SCOPICON WIDE ANGLE
Lens is filled by wide-angled beam. Diminished deflection required. Small detail sharply visible.

LOCKED IN PERMANENTLY ACCURATE RELATIONSHIP

The microscope is permanently clamped on the lamp platform; once the initial aligning adjustment has been made, it never changes. Carry the unit anywhere; tilt it to the steepest angle, if you will; optical alignment stays fixed always.
