

**THIRD INTERNATIONAL CONFERENCE
ON MONOCLONAL ANTIBODY IMMUNOCONJUGATES
FOR CANCER**

FEBRUARY 4-6, 1988

Leading researchers from around the world will present the latest results of their clinical trials in man using monoclonal antibodies linked to isotopes, drugs, and toxins for cancer therapy and detection. The design of the program includes five half-day sessions focusing on radioimmunoassay, radioimmunotherapy, chemoimmunotherapy and immunotoxins. A new session has been added which addresses current issues relevant to the clinical use of immunoconjugates in man. Each topic session will begin with an overview of the field and the current status of human clinical trials. Because of the superior abstracts received for the past two conferences, invited speakers will be followed by the presentation of preferred abstracts describing recent clinical and pre-clinical data. Panel discussions will follow each session. In addition, there will be an afternoon devoted to additional oral and poster presentations from submitted abstracts. This conference will be of interest to tumor immunologists, biotechnologists, medical oncologists, radiation therapists, nuclear medicine physicians and other interested health professionals and researchers working in this field.

The conference will be held at the San Diego—Marriott Hotel and Marina (formerly the Hotel Inter-Continental, San Diego), February 4-6, 1988. The fee is \$355 after December 1, 1987.

CANCER. IT'S SIMPLY NOT WHAT IT USED TO BE.

Over the last 40 years, research programs supported by the American Cancer Society have made increasing progress in the treatment, detection and prevention of cancer.

In 1986 alone, the Society funded over 700 projects conducted by the most distinguished scientists and research institutions in the country.

Which is why, this year, hundreds of thousands of people will be successfully treated for the disease.

We are winning.

But we need you to help keep it that way.

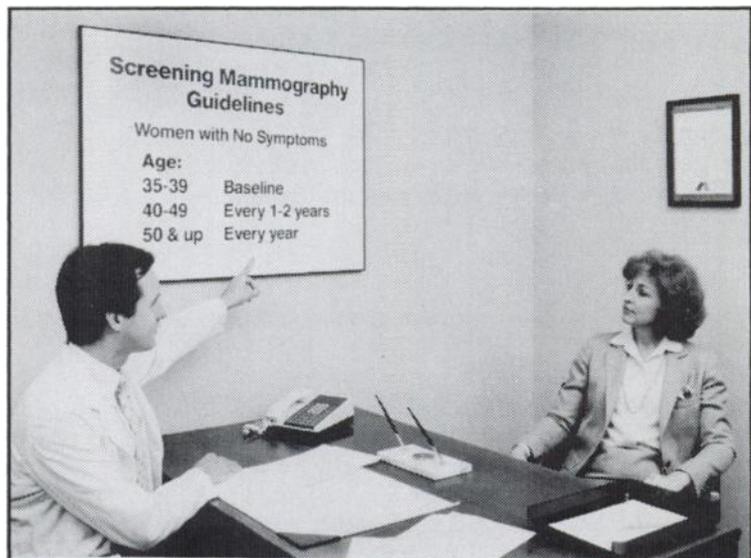

What will you tell her about screening mammography?

Many of your patients will hear about screening mammography through a program launched by the American Cancer Society and the American College of Radiology, and they may come to you with questions. What will you tell them?

We hope you'll encourage them to have a screening mammogram, because that, along with your regular breast examinations and their monthly self examinations, offers the best chance of early detection of breast cancer, a disease which will strike one woman in 10.

If you have questions about breast cancer detection for asymptomatic women, please contact us.
