

WE FIND PATHS WHERE
OTHERS FAIL TO LOOK

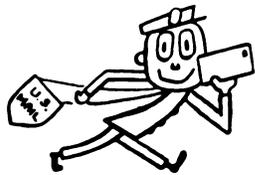

At the Sandoz Cytokine Development Unit (CDU), we are exploring new paths of research and development and studying more options in disease treatment than were ever thought possible. Using the latest technology, the CDU is working to develop these treatments rapidly, with the same high-quality standards we have always upheld.

At the CDU, our commitment to research and development is unsurpassed. Sandoz created the

CDU as an independent unit, fueled by the dedication of specialized personnel. These highly skilled individuals have been brought together for a common goal—to explore new paths of therapy.

REQUEST FOR RESEARCH PROPOSALS

The National Live Stock and Meat Board is requesting Nutrition Research proposals on the topic of meat consumption and cancer risk. Proposals should be original ideas on new initiatives. Epidemiology studies are not being solicited.

The following is a list of possible research areas:

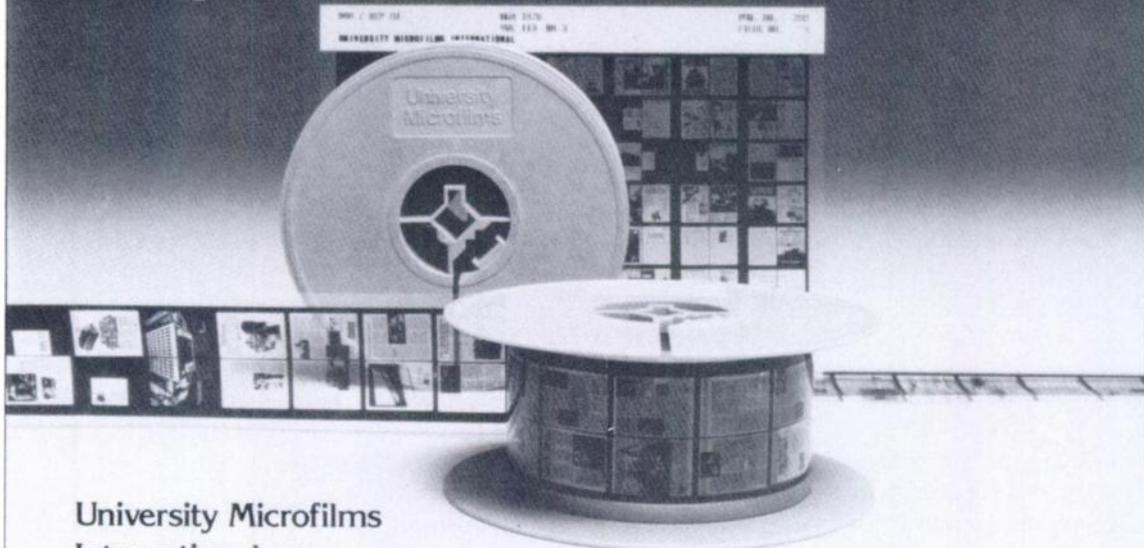

- Mutagenic and antimutagenic components in meats
- Influence of meat fat and/or fatty acids on specific site cancer risk (i.e., colon cancer)
- Meat nutrients involved with immune function and cancer prevention
- Oxidation products and meat intake

Awards will be granted for a one year period. Previous successful applications of this type have received awards in the range of \$35,000 - \$45,000. Overhead costs are not allowed. Deadline for receipt of proposals is July 9, 1993. A scientific advisory committee will review proposals based on project design, justification of animal model, and application to meat consumption. Award notification will be made in October, 1993.

For applications or additional information contact Cynthia M. Schweitzer, Ph.D. at (312) 670-9423.

Try a New Perspective... ...on the Environment!

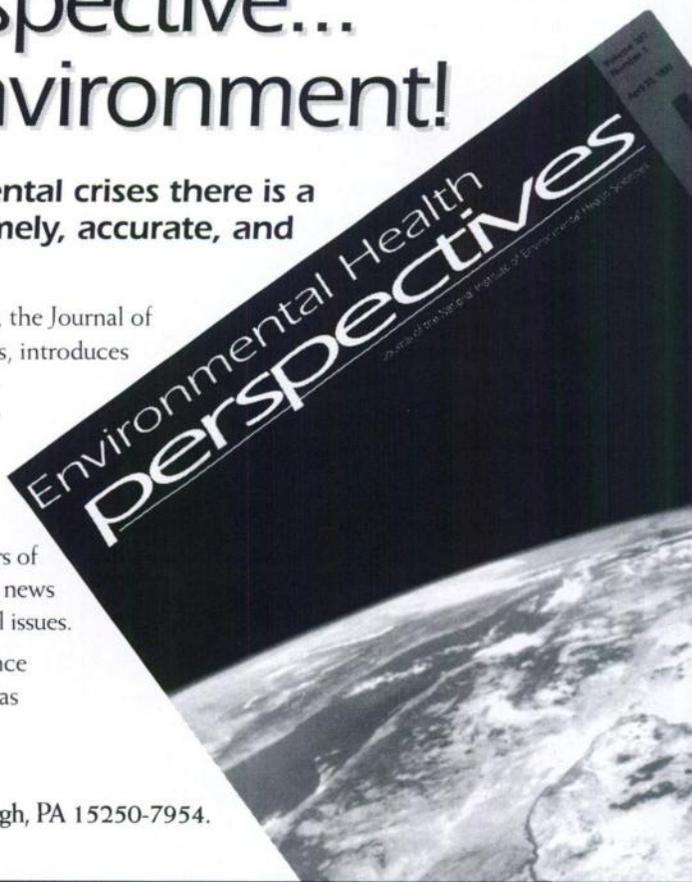

In today's world of global environmental crises there is a greater need than ever before for timely, accurate, and understandable information.

To meet this need, Environmental Health Perspectives, the Journal of the National Institute of Environmental Health Sciences, introduces an exciting and comprehensive new format designed to communicate the science and information necessary for making critical and reasonable decisions on the environment and human health.

The new EHP is a monthly journal containing original research articles and scientific commentary on the frontiers of environmental research as well as incisive and informative news articles of interest to those concerned with environmental issues.

EHP will continue to publish monographs and conference proceedings of developments in environmental science as Environmental Health Perspectives Supplements.

Signet 4E3 Monoclonal Antibody for Detection of P-glycoprotein- External Epitope

P-glycoprotein detection is becoming an important tool in the investigation of cancer multidrug resistance (MDR), a phenomenon in which resistance to one drug is associated with resistance to a variety of unrelated drugs.

Signet's 4E3 monoclonal antibody, directed against an external epitope of P-glycoprotein, can be used to determine the level of expression of P-glycoprotein in tissue specimens and on intact, viable cells, providing the advantage of being able to isolate P-glycoprotein positive cells for further studies.

Please call 800-223-0796 for additional information on 4E3 and our other antibodies for investigation of multidrug resistance, C219, C494 and JSB-1.

Carlo M. Croce, M.D., Editor-in-Chief

Subscribe to Cancer Research—the leading citation source of original studies in cancer research and cancer-related biomedical science. Issued semimonthly, *Cancer Research* publishes 7,000 pages of important research each year, including the following regular features:

- **The most up-to-date articles** in basic research and clinical and epidemiological investigations by authors from the United States and more than 20 countries
- **Perspectives in Cancer Research**, in which leading investigators explore contemporary and at times controversial topics
- **Advances in Brief**, a rapid communication category for short but definitive, highly significant reports
- **Supplemental issues** developed from symposia on relevant subjects
- **Proceedings of the American Association for Cancer Research**, a special annual issue that offers stimulating new research ideas in abstract form

Journal
In Its Field

Now in its fourth year of
publication with a newly
expanded Editorial Board.

Cell Growth & Differentiation

The Molecular Biology Journal of the American Association for Cancer Research

SCOPE

Cell Growth & Differentiation (CG&D) publishes significant, original research on the molecular biology of cancer. Its scope encompasses *in vitro* and *in vivo* studies pertaining to normal and abnormal cellular processes. Topics include oncogenes and tumor suppressor genes, gene expression and regulation, transcription factors, growth factors and their receptors, molecular mechanisms of tumor progression, signal transduction, cell cycle, differentiation, and development.

CG&D's distinguished, international Editorial Board has recently been expanded to cover this broad range of subjects even more comprehensively.

In addition to original investigations, *CG&D's* format includes Research Capsules which summarize and update rapidly changing concepts in the field and a Viewpoints section for signed and anonymous write-in discussion of published articles.

INVITATION TO AUTHORS

Mail manuscripts to Editorial Board member of your choice. For details about manuscript submission, contact:

Dr. George F. Vande Woude, Editor-in-Chief
301-846-1302, FAX 301-696-1549, or the
American Association for Cancer Research
215-440-9300, FAX 215-440-9354.

- Average peer review time--2-3 weeks.
- Average time from acceptance to publication--10 weeks.
- Indexed by *Chemical Abstracts*, *Index Medicus*, *MEDLINE*, *CancerLit*, *BIOSIS Previews*, and *Current Contents*.

ACTUAL SIZE

THINK BIG.

Discovering drug treatments for AIDS. Testing new anticancer agents. Screening Alzheimer's disease therapies. . . .

More than 4500 publications attest to the fact that ALZET® micro-osmotic pumps are opening up big opportunities in preclinical research.

These miniature, implantable pumps have proven effective at delivering a wide variety of agents, over sustained periods of time, in mice and rats. They maintain effective levels of short half-life compounds in plasma and tissues, and can be used with a catheter to target delivery to specific organs or tissues.

So, if you want to expand your research possibilities, think about ALZET pumps. For technical data relevant to your work, call (800) 692-2990 or (415) 494-5323 or fax (415) 494-5151. Tell us the compound you want to deliver and where you want it to go. We'll send you published references and technical information to stimulate your thinking.

It just might be the start of something big.
