

Select Novocastra Monoclonal Antibodies

CD5 Proving to be *unique* and important in its utilization on formalin-fixed, paraffin-embedded tissue, this antibody detects the *CD5 antigen* on T cells, thymocytes and a subset of B cells. A straightforward heat pretreatment is recommended to obtain the best staining. (NCL-CD5)

CYCLIN A Just released, this *cyclin A* antibody is suitable for application in paraffin-embedded immunohistochemistry techniques and Western blotting. This antibody may be useful as a *proliferating cell marker* and complements the range of cyclin antibodies currently available. (NCL-CYCLIN A)

CYTOKERATIN (8/18) Termed 5D3, this clone recognizes *all simple and glandular epithelium*, and produces a specific cytoplasmic immunostaining pattern. For paraffin-embedded sections, a trypsin pretreatment is recommended for optimal results. (NCL-5D3)

ESTROGEN RECEPTOR Gaining recognition as an *outstanding antibody*, the recently introduced *estrogen receptor 6F11 clone* provides intense nuclear reactivity equally well in frozen and paraffin-embedded tissue. For convenience, this antibody is also provided in an easy-to-use kit form. (NCL-ER-6F11; For kit: NCL-ER-Paraffin)

Ki67 ANTIGEN Identified as an *extremely versatile antibody* with applications in immunohistochemistry, Western blotting and flow cytometry, this *cell proliferation marker* also cross reacts with the Ki67 nuclear antigen in mouse and rat tissue. A polyclonal Ki67 antibody is also available. (NCL-Ki67-MM1 and NCL-Ki67p)

Please contact our Technical Service Department for further information on antibody specifications or to obtain a complete Novocastra Laboratories catalog.
These products are for research use only.

DNA VANDALS!

When radicals meet DNA, the results can be shattering! But measuring ROS doesn't have to be.

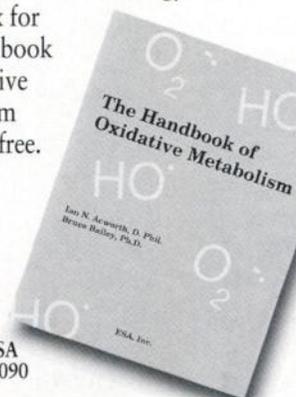

ESA can help you study Reactive Oxygen Species' (ROS) role in neurological disorders, aging, cancer, apoptosis and more. With HPLC/coulometric detection you can monitor damage to DNA directly by measuring hydroxy guanine adducts, and determine free radical levels by the conversion of salicylate to DHBA.

Analysis with ESA's Coulochem® and CoulArray™ systems is highly sensitive, fast, eliminates ³²P and minimizes sample preparation.

So let ESA help you put it together, with the big picture on advanced ROS analytical methodology.

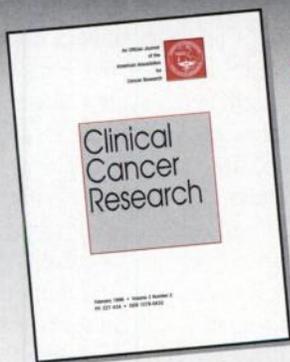

Call or fax for The Handbook of Oxidative Metabolism today. It's free.

**“CLINICAL CANCER RESEARCH
 REPORTS NEW STUDIES THAT CAN
 TRANSFORM RESEARCH FINDINGS INTO
 ACTUAL INTERVENTIONS IN THE
 MANAGEMENT OF CANCER PATIENTS.”**

John Mendelsohn, M.D.
 Editor-in-Chief, *Clinical Cancer Research*

DON'T MISS A SINGLE ISSUE.

Clinical and translational investigations continue to have a dramatic impact on the treatment of cancer, making the need for up-to-date information increasingly important. Every month, basic and clinical cancer researchers turn to *Clinical Cancer Research* for the latest reports of significant new studies. Act now to ensure you receive research findings that are too important to miss.
