

Supplementary Figure 10

Supplementary Figure 10. Representative dot plots for data shown in figure 4D-F and additional exhaustion marker analysis of CD8⁺ T cells in mice bearing SHP2 manipulated 4T1 metastases. A, Representative dot plots of TIM3⁺ population as a frequency of CD45⁺CD8⁺ cells in isolated spleens (left) and lung tissues (right) of each group. B, Representative dot plots of TIM3⁺LAG3⁺ population as a frequency of CD45⁺CD8⁺ cells in isolated spleens of each group. C, Representative dot plots of TIM3⁺LAG3⁺ population as a frequency of CD45⁺CD8⁺PD-1⁺ cells in isolated lung tissues of each group. D, Representative dot plots and quantification of TIM3⁺LAG3⁺ population as a frequency of CD45⁺CD8⁺PD-1⁺ cells in isolated spleens of each group. E, Representative dot plots and quantification of LAG3⁺ population as a frequency of CD45⁺CD8⁺ cells in isolated spleens of each group. In all panels, *p<0.05, ***p<0.001, n = 4.
