

A

+ Media

B

+ GL261-KO

Supplementary Fig. S5: T-cells expressing different mB7-H3 different CAR constructs expand in an antigen-dependent manner. Transduced T-cells were cocultured with media only or GL261 *B7h3*-KO tumor cells at a 2:1 ratio with restimulation every 3-days against fresh tumor cells until they no longer killed and/or expanded. **(A)** Fold expansion of different T-cell donors in the absence of target cells ($n = 5$). **(B)** Expansion of different T-cell donors upon stimulation with antigen-negative GL261 *B7h3*-KO tumor cells ($n = 7$).
