Supplementary Fig. S13: Analysis of cell-cell communication within the TIME from our scRNAseq dataset. The signaling between each of the 21 Seurat clusters were analyzed and reconstructed with CellChat. **(A)** Circle plot showing number and intensity of significant ligand-receptor interactions between any two pairs of Seurat clusters. **(B)** Heatmap quantifies the role of each cluster as a sender and receiver/mediator of each interaction.

Mac – macrophages, *MG* – microglia, *DC* – dendritic cells.
