

Supplemental Figure 1. Micro tissue array of human neuroblastoma patient samples stained for CD24. Neuroblastoma and peripheral nerve tissue micro array (TMA) slide (NB642c, amsbio), containing 32 cases (in duplicate) was stained by immunohistochemistry for CD24. Tissue samples include tumors isolated from the Adrenal gland (Adr), Mediastinum/left posterior (Med), Pelvic cavity (Pel), and Retroperitoneum (Ret) as well as control Peripheral nerve (Per) tissue. Visualization of the tissues was performed using Keyence and quantified using FIJI ImageJ.
