**Supplemental Figure 3. Effect of the Zika viral treatment of neuroblastoma tumors on tumor mass over time.** ZIKV was introduced once at a concentration of  $2 \times 10^6$  pfu for all tumors. **A)** IMR-32 tumor size was measured at Day 0, 2, 5, and 7 post-treatment compared to vehicle control treatment. Error bars represent standard deviation. \* $p < 0.05$  from Vehicle, unpaired t-test, Days 2, 5, & 7. **B)** SK-N-AS tumor size was measured at Day 0, 4, 7, and 10 post-treatment compared to vehicle control treatment. Each time point included n=3 for vehicle and Zika Error bars represent standard deviation. \* $p < 0.05$  from Vehicle, unpaired t-test, Days 4, 7, & 10.
