

**Supplemental Figure 6. Direct comparison of the relative expression of CD24.** Expression was measured between cells (*in vitro*) to tumors (*in vivo*) for **A**) SK-N-AS/WT, **B**) SK-N-AS/VO, and **C**) SK-N-AS/CD24. CD24 expression was assessed using qRT-PCR comparing cells prior to injection into murine hosts to tumors resected post-study. All qPCR expression data shown was normalized to GAPDH and are the composite of triplicate wells acquired from triplicate experiments. Error bars represent standard deviation. \*p > 0.05 from A) SK-N-AS/WT Cells, B) SK-N-AS/VO Cells, or C) SK-N-AS/CD24 Cells, unpaired t-test for Tumor.
