

Supplementary Figure S3.

A, Immunoblot analysis of TTP and β -actin levels in PANC-1 and 293T cells. **B**, Representative images (5x magnification) of immunohistochemistry (IHC) using a TTP antibody (*left*) and a non-specific rabbit IgG antibody (*right*) on the same FFPE prostate cancer sample. **C**, Kaplan-Meier curve showing the time to BCR in pathologically high-grade primary prostate cancer patients in the Mahajan et al. TMA cohort separated into TTP-High and TTP-Low subtypes based on composite TTP IHC scoring (p-values, Mantel-Cox log-rank test).
