Supplemental Figure 1. Response in a patient with renal cell carcinoma; correlation of DCE-MRI and CT scan. (A) DCE-MRI at baseline showing high blood flow in tumor relative to normal tissue; (B) DCE-MRI after 4 weeks of treatment showing reduction of tumor blood flow to a level similar to normal tissue; (C) CT scans of the same lesion showing shrinkage and necrosis of tumor after 1 cycle.

DCE-MRI, dynamic contrast-enhanced magnetic resonance imaging; CT, computed tomography.
