

Supplementary Figure 1. Stably transduced NCI-H1299 with Notch reporter. Upper panel, initial vector transduction of NCI-H1299 cells. A) control mCMV vector. B) Notch reporter vector. Middle panel, flowcytometry sorted GFP-bright cells regenerating GFP-dim cells after C) first passage D) third passage E) fifth passage. Lower panel, flowcytometry sorted GFP-dim cells unable to generate GFP-bright cells after F) first passage, G) third passage, H) fifth passage.
