

Figure S4. CD20⁺ and FOXP3⁺ tumor infiltrate according to EC molecular subtype

(A) Percentages of tumors displaying dense intrastromal CD20⁺ infiltrate in the center of the tumor (CT) and invasive margin (IM). (B) Quantification of number of FOXP3⁺ cells in tumor regions by EC molecular subtype. Horizontal bars indicate the median. Statistical comparisons in A and B were made by unadjusted two-sided Mann-Whitney test; * and ** indicate $P < 0.05$ and $P < 0.01$ respectively.
